		Important Instructions to the Examiners:		
		1) The Answers should be examined by key words and not as		
		word-to-word as given in the model answer scheme.		
		2) The model answer and the answer written by candidate may		
		vary but the examiner may try to assess the understanding		
		level of the candidate.		
		3) The language errors such as grammatical, spelling errors		
		should not be given more importance. (Not applicable for		
		subject English and Communication Skills.)		
		4) While assessing figures, examiner may give credit for		
		principal components indicated in the figure. The figures		
		drawn by the candidate and those in the model answer may		
		vary. The examiner may give credit for any equivalent		
		figure drawn.		
		5) Credits may be given step wise for numerical problems. In		
		some cases, the assumed constant values may vary and there		
		may be some difference in the candidate's Answers and the		
		model answer.		
		6) In case of some questions credit may be given by judgment		
		on part of examiner of relevant answer based on candidate's		
		understanding.		
		7) For programming language papers, credit may be given to		
		any other program based on equivalent concept.
